

## Retraction notice regarding “The impact of climate change on pediatric health: a literature review on emerging risks”

### Abstract

This retraction notice regards the following article:

Eskandar K. RETRACTED: *The impact of climate change on pediatric health: a literature review on emerging risks*. J Pediatr Neonat Individual Med. 2025;14(1):e140106. doi: 10.7363/140106.

JPNIM strives to provide original academic content.

On submission of a paper to JPNIM, in the submission form, the authors declare explicitly that their submission is original, i.e. it has not been previously published, nor is it before another journal for consideration. Moreover, before publication, the authors sign a publication agreement containing those declarations.

Unfortunately, the Editors of JPNIM have become aware of the fact that an article with the same title and essentially the same text was published in another journal:

Eskandar K. *The Impact of Climate Change on Pediatric Health: A Literature Review on Emerging Risks*. Rev Ecuat Pediatr. 2024;25(3):24-36.

For this reason, the Editors of JPNIM have decided to retract the paper due to article duplication.
